

— THE OPERATING SYSTEM FOR SHARED REVENUE —

Reven

Turning partnerships from a cost center into a **profit center.**

Partnerships get treated as a cost center, because no one can prove the revenue they **create**.

The problem isn't that partnerships lack value. It's that the value is hard to measure, hard to verify, and hard to connect to actual collected revenue.

WHAT PARTNERSHIP TEAMS ACTUALLY BRING

Partners

Referrals

Co-selling

Channel activity

Ecosystem influence

BUT THE VALUE STAYS INVISIBLE

MEASURE

Hard to **measure** — what did each partner truly drive?

VERIFY

Hard to **verify** — can the claim be backed by evidence?

CONNECT

Hard to **connect** — tie it to revenue actually collected.

Reven.

WHEN FINANCE ASKS

Which partner created which revenue, under which agreement, and how much do we **owe them?**

- The answer is usually **unclear**.

The operating system for revenue shared between companies.

Companies don't grow alone anymore. They grow with partners, yet most still manage that shared revenue **by hand**.

THE REVEN BELIEF

Partnerships aren't a relationship problem.
They're a revenue problem.

REVEN HELPS COMPANIES

Manage

Track

Prove

Share

Improve

Software to manage the revenue created **through** partners, not just to manage partners.

EVERY SERIOUS PARTNERSHIP RAISES THE SAME QUESTIONS

What was agreed?

What actually happened?

Who contributed?

Who deserves credit?

Who should be paid?

What should be disputed?

Which partner is
profitable?

Where should we invest
more?

A deal used to be one company's revenue. Now it's split across partners.

WHY IT MATTERS The winners won't have the most partners. They'll be the ones who can **prove** which partners create value, deserve credit, and are worth scaling.

Companies have partners. They don't have a system for partner revenue.

One deal. Five systems. Five different answers to the simplest question: what does the partner actually get paid?

THE REAL PROBLEM

It isn't that partner teams need another tool. It's that companies can't manage money, credit, and trust when partners are involved.

WHAT IT COSTS THEM

Confusion

Delays

Disputes

Lost trust

Start with the pain companies already feel, built around one core object.

THE PARTNER REVENUE CLAIM

"I helped create this revenue, and I should get credit or payment for it."

EVERY CLAIM IS CHECKED AGAINST

- the partner
- the agreement
- the deal
- the customer
- the revenue
- payment received
- the rules
- approvals
- disputes
- the payout

Reven starts as one clear place to manage partners, programs and the deals they generate. The claim is the bridge to the money.

Narrative

Globex Corp — sourced contribution for Core Platform.

Partner revenue follows a journey. Reven turns it into a system and grows closer to the money.

• Each step creates the next reason to use Reven, from operational tool to **finance and executive decisions.**

Reven connects partner activity to financial truth.

It doesn't replace your systems. It connects the important ones, then carries one claim all the way to a statement.

01 · ATTRIBUTION

Who really contributed.

02 · ELIGIBILITY

How much they should earn.

03 · EVIDENCE

Proof finance can trust.

04 · STATEMENT

What the partner is paid.

One system. Four leaders. Four answers.

Land with the partnership team, then become valuable to **sales, finance, and leadership.**

Partner revenue is too important to manage manually, in **every industry.**

01

More partner-led growth

More companies grow through partners, not direct sales alone.

02

A bigger share of revenue

Partner revenue is now material, not a rounding error.

03

Finance needs control

Clearer rules, evidence and control before payouts.

04

Systems now connect

CRM, finance, contract & payment systems link via APIs.

05

AI is finally useful

Structured data lets AI spot patterns, disputes and risks.

Every industry has partner revenue. BUILT FOR ANY COMPANY THAT MAKES MONEY WITH OTHERS

Software

Fintech

Telecom

Manufacturing

Consulting

Marketplaces

Real estate

Government

Logistics

The industry changes, **the questions don't.** Who created the revenue? What do they deserve? Can we prove it? Should we pay it?

The more companies use Reven, the smarter Reven becomes.

FIRST, REVEN STRUCTURES THE DATA

Scattered across emails, spreadsheets, contracts, and finance systems, this data can't teach anything. Structured in one place, it can.

THEN, AI CAN HELP COMPANIES

Spot risky claims	Predict disputes
Recommend better terms	Identify high-value partners
Detect margin leakage	Show which programs deserve more investment

Other tools manage pieces. Reven manages the whole journey.

Every tool owns one slice. The journey falls through the gaps between them.

THE GAP | Existing tools aren't useless. They just stop short. No one manages partner revenue end-to-end. **That's the category Reven is building.**

Reven sells software first, and takes a cut of the money only once it runs the whole network.

MONETIZATION DEEPENS BY STAGE ↗

WHY THIS ORDER Reven earns trust by being **useful software first**. Only once it is the trusted system everyone runs on does it start taking commission and transaction fees, at Stage 3, the orchestration layer.

Land with daily pain. Expand into strategic control.

The land-and-expand motion, mapped straight onto the org chart.

Built by the three operating layers of partner revenue.

Product strategy, commercial execution, and legal-contract infrastructure: the exact layers required to build the Partner Revenue OS.

LAYER 03
LEGAL & CONTRACT

Mohammed Mosallamy
CLO Legal Infrastructure, Contract Lifecycle & Revenue Governance

Builds the legal operating layer inside the product, translating partner agreements and revenue-sharing logic into productized workflows.

OWNS

Legal product features

Contract lifecycle

Legal operating model

Partner & client contracts

Revenue governance

WHY THIS TEAM WINS

Reven sits at the intersection of partnerships, revenue operations, finance, and legal agreements, and the founding team is built around exactly those layers.

- Product & capital strategy
- Commercial execution
- Legal-contract infrastructure

2.0M SAR as pre-seed to scale the product and reach Product-Market Fit.

Twelve months of runway to ship the product, win first customers, and prove repeatable demand.

The future of revenue is shared.

The winners won't be the companies with the most partners. They'll be the ones that know which partners create value, deserve credit, should be paid, are profitable, and should scale.

create value

deserve credit

should be paid

are profitable

should scale

THE CATEGORY

The Partner Revenue Operating System

Not partner management. Not a portal. Not commission tracking. A new category.

THE BET

Reven is building the operating system for partner revenue.
